

As an amatuer raio operator, I am deeply concerned over the possiable ramifications of Broadband Over Power Line. IN an already overly RF noise enviroment, this only addes to the problems I face in my daily operations. This hole issue is seemingly trying to place one mode of operation over another. This is like me transmitting a obviously splattering signal at 2KW into my neibhors TV set, and ignoring that fact I have interupted his ability to watch TV.

WE both have the right to operate and watch TV at the same time. From all the information that has come forth on Broadband Over Power Line, it would appear that my right to operate uninfringed would be denied because of the Broadband Over Power Line NARVANIA that seemly exist at the FCC.

Thanks
